The time period for reply, if any, is set in the attached communication.

## Office Action Summary

Application No.

10/023,085

Applicant(s)

MASTHOFF, JUDITH F.M.

Examiner

Michael Roswell

Art Unit

2173

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 19 October 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-3,5-15 and 17-20 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-3,5-15 and 17-20 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1, 3, 5, 6, 8-10, 13, 15, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Roy et al (US Patent 5,966,135), hereinafter Roy.

1. Regarding claim 1, Roy teaches displaying a subject image (taught as the display of a map within a browser, at col. 11, lines 31-45), displaying an enlargement of the subject image in response to a user selection of a desired point, the desired point and a point determined from an area associated with the user selection on which the enlargement is based, wherein the determined point is associated with a center of the area (taught as the ability of the user to zoom in around a selected point on the map, at col. 13, lines 25-29), and displaying upon the enlargement the determined point as a first co-ordinate parameter (taught as the selection of "map objects" through user clicks, such as the point upon which the enlargement is centered, at col. 13, lines 41-46, which may be defined in co-ordinate values or longitude/latitude values, at col. 19, lines 16-17. Furthermore, Roy teaches the display of information relating to selected map objects through reports, at col. 12, lines 57-62, which includes returning point data, as seen in Appendix C of col. 19. Roy further discusses defining objects by co-ordinate values, at col. 5, lines 21-34).

2. Regarding claim 3, Roy teaches displaying a further enlargement of a previous enlargement of the subject image in response to a next user selection, wherein the further enlargement is based on a point determined as a center of a area associated with the next user selection, taught as the ability to zoom through differing zoom levels around a selected point, at col. 13, lines 25-29 and 41-44, and the ability of the user to zoom in around a selected point on the map, at col. 13, lines 25-29.
3. Regarding claim 5, Roy teaches displaying a reduction of a previous enlargement of the subject image in the same scale as the subject image prior to enlargement, taught as the return to a previous zoom level, at col. 13, lines 41-44.
4. Regarding claim 6, Roy teaches returning a second point, in response to a user selection, as a second co-ordinate parameter, taught as the choosing of multiple map objects, at col. 12, lines 54-56.
5. Regarding claims 8-10, Roy teaches a computer program comprising instructions, computer-readable storage medium having data representing instructions, and an apparatus having a display, a processor, and a user input device, all for displaying a subject, displaying an enlargement of the subject image in response to a user selecting a point on the subject image and displaying on that enlargement that point selected by the user, and returning a point previously selected by the user as displayed on an enlargement of the subject image as a first co-ordinate parameter, at col. 3, lines 62-67 through col. 4, lines 1-56.

6. Regarding claim 13, Roy teaches displaying a subject image (taught as the display of a map within a browser, at col. 11, lines 31-45), displaying an enlargement of the subject image in response to a user selecting an area about a desired point on the subject image and displaying the desired point on the enlarged image, determining and displaying on that enlargement a point upon which the enlargement is based, the point being determined as a center of the area (taught as the ability of the user to zoom in around a selected point on the map, at col. 13, lines 25-29), and identifying the determined point as a first co-ordinate parameter (taught as the selection of "map objects" through user clicks, at col. 13, lines 41-46, which may be defined in co-ordinate values or longitude/latitude values, at col. 19, lines 16-17. Furthermore, Roy teaches the display of information relating to selected map objects through reports, at col. 12, lines 57-62, which includes returning point data, as seen in Appendix C of col. 19. Roy further discusses defining objects by co-ordinate values, at col. 5, lines 21-34. Also, if the point selected is displayed on the enlarged image, it inherently is identified as displayed: either by the user who notices the display of the selected point, or by the program that centers the image zoom around the selected point). Regarding claim 16, Roy teaches displaying an enlargement of the subject image in response to a user selecting a point on that subject image displayed centered about that point selected by the user, taught as the ability to zoom in around a selected point, at col. 13, lines 25-29.

7. Regarding claim 15, Roy teaches displaying a further enlargement of a previous enlargement of the subject image in response to a next user selection on the enlargement, taught as the ability to zoom through differing zoom levels, at col. 13, lines 25-29 and 41-44.

8. Regarding claim 17, Roy teaches determining and returning a second point based on a user selection as a second co-ordinate parameter, taught as the choosing of multiple map objects, at col. 12, lines 54-56.

***Claim Rejections - 35 USC § 103***

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 2 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roy and Smith (UK Application GB 2,344,037, as cited in the previous Office Action).

9. Regarding claims 2 and 14, Roy teaches returning a point previously selected by the user (identifying the point) as displayed on an enlargement of the subject image as a first co-ordinate parameter (taught as the selection of "map objects" through user clicks, at col. 13, lines 41-46, which may be defined in co-ordinate values or longitude/latitude values, at col. 19, lines 16-17), and displaying a reduction of a previous enlargement of the subject image (taught as the return to a previous zoom level, at col. 13, lines 41-44).

However, Roy fails to explicitly teach returning a point previously selected by the user (identifying the point) as displayed on an enlargement of the subject image as a first co-ordinate and displaying a reduction of a previous enlargement of the subject image in response to a single user input.

Smith teaches a graphical application that displays subject images and enlarges the subject image in response to user action, similar to the method of Roy. Furthermore, Smith teaches returning a point previously selected by the user (identifying the point) as displayed on an enlargement of the subject image as a first co-ordinate and displaying a reduction of a

previous enlargement of the subject image in response to a single user input, taught as the return to an original scale in response to the selection of a first point in a line, at page 5, lines 31-37.

Therefore, it would have been obvious to one of ordinary skill in the art, having the teachings of Roy and Smith before him at the time the invention was made to modify the returning of a point previously selected by the user (identifying the point) as displayed on an enlargement of the subject image as a first co-ordinate and displaying a reduction of a previous enlargement of the subject image with the single input trigger of Smith, in order to obtain a graphical application that returns point co-ordinates and the display to the original scale in response to a single user input.

One would be motivated to make such a combination for the advantage of more precise selection of a point provided by an enlarged view. See Smith, page 5, lines 39-43.

Claims 7, 11, 12, and 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roy and Boyce et al (US Patent 6,459,986), hereinafter Boyce.

10. Regarding claims 7 and 18, Roy teaches returning a first co-ordinate parameter and a further point selected by the user as a second co-ordinate parameter, taught as the choosing of multiple map objects, at col. 12, lines 54-56.

However, while Roy discloses viewing the distance between any two points on a map picture (col. 12, lines 10-13), Roy fails to explicitly teach performing a calculation to determine the distance between the first and second co-ordinate parameters.

Boyce teaches a routing system for use with maps, as those disclosed in Roy. Furthermore, Boyce teaches a method for performing a calculation to determine the distance between the first and second co-ordinate parameters, at col. 4, lines 18-22.

Therefore, it would have been obvious to one of ordinary skill in the art, having the teachings of Roy and Boyce before him at the time the invention was made to modify the scalable map display with point-selection means of Roy with the first and second co-ordinate distance calculating of Boyce in order to obtain a scalable map display wherein the distance between selectable points may be calculated.

One would be motivated to make such a combination for the obvious advantage of displaying pertinent information to a user, or assisting the routing system of Boyce in finding the most suitable route between selected points. See Boyce, col. 4, lines 18-22.

11. Regarding claims 11, 12, 19, and 20, Boyce teaches determining distances between first and second co-ordinate parameters that are not straight line distances but instead are actual distances that can be traversed to connect the first and second co-ordinate parameters, the actual distance including at least one permissible travel route between the points, taught as the generation of a route over travelable roads between a user-selected starting point and destination point, at col. 3, lines 14-20, 28-31, and col. 4, lines 14-22.

### ***Response to Arguments***

Applicant's arguments filed 19 October 2007 have been fully considered but they are not persuasive.

Applicant's amendment to claims 1 and 13 and subsequent arguments center around the premise of a "desired point", "determined point", and a selection area associated with both.

Applicant's arguments assert that the desired and determined points are two distinct points; however, the examiner believes that in applying the broadest reasonable interpretation to the claims, it can be seen that the desired and determined points may be deemed analogous to the centered, selected point taught by Roy, around which image zooming takes place. The language of the claimed invention does not require that the desired and determined points be mutually exclusive, and as such the examiner maintains that the single selected point of Roy satisfies the claimed limitations for both the desired and determined points. Roy further teaches determining a desired and determined point from an area associated with user selection, as the user must select the selected point from an area displayed as part of a subject image.

#### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
